曲江九里临街而建, 因此示范区设计为半开放: 路人能看到其景观, 整个项目也能融于整体环境中。

丰富的植栽和低墙相结合, 引领人们从一角的水景走近入口。几步台阶将入口步道与市政道路分割。如瀑布倾泻的玻璃元素和水景及灯带结合, 强化了入口体验。进入示范区内部, 水景一直延伸到精心设计“墙洞”处, 再次将示范区内外相呼应和交织。

Taking advantage of its corner location and long street frontage we have enabled a design that is semi open to the street, allowing glimpses into the landscape beyond and integrating the future residential project with the community.

Dynamic bands of plantings combine with low walls guiding people from the water feature at the corner to the main entry. The main path steps slightly from the street and is bounded by glass elements combining water features and lighting that enhance the entry experience. Internally a water feature reaches towards a carefully located void in the wall that borrows the existing landscape to further connect people to the site.

PEOPLE FOCUSED **FUTURE DRIVEN.** 聚焦人本 预见未来。
